

Fres Flow™

Easy to Pour, Easy to Store

Fres-co introduces Fres Flow.

The next generation of multi-serve retail packaging for shelf stable, refrigerated products.

With more than three decades of experience producing high-quality flexible packaging, Fres-co is pleased to present Fres Flow, our latest packaging innovation for a wide variety of products, including:

- **Dairy** — coffee creamers, half & half, heavy cream, organic and flavored milks
- **Dairy Alternatives** — almond milk, soy milk, coconut milk and protein-fortified nutritionals
- **Non-Dairy Beverages** — fruit and vegetable juices, iced teas and coffees, and isotonic
- **High-Quality Wines and Spirits** — red wines, white wines or cocktail mixes
- **Prepared Foods** — broths and stocks, edible oils, culinary creams, and liquid eggs

While this array of products may seem widely different, they all have one thing in common. The producers, retailers and consumers of these products all need packaging that is lighter, more convenient, and more environmentally friendly than traditional methods. Products contained in the Fres Flow package will get the benefits of a longer shelf life, which will help preserve their nutritional value. It is available in both 5.0 liter and 3.0 liter sizes.

Fres Flow Offers:

- Effective Containment of Shelf Stable, Refrigerated Products
- Higher Output via VFFS Technology
- Pierce-at-First-Use Tap
- Minimized Oxygen Ingress
- Consumer-friendly Ergonomic Design
- Impactful Billboard Effect for Marketing

Fres Flow is a complete system.

Our customers can expect higher output through our Vertical Form Fill Seal technology, whether from our low acid aseptic, high acid aseptic, or extended shelf life machines. Additionally, our superior packaging materials include multiple-ply high barrier rollstock with clear- or foil-based laminations.

Fres Flow also utilizes Fres-co's pierce-at-first-use tap, a groundbreaking innovation that reduces oxygen ingress and keeps our customers' products fresher, extending their shelf life. Our new generation of taps also have flow rates that are demonstrably better than others available.

Fres Flow is available now.

Let our technical experts and engineers invite you to fulfill your challenges with this solution.

Fres Flow is ideal for a wide range of products, including:
